

## WHAT THE GREEN ACTIVISTS DO FOR US – like it or not . . .

**YOU** decide where you want to live: <http://www.wonderfulwarmworld.com>

**YOU** decide what you want to believe: <http://www.numberwatch.co.uk/warmlist.htm>

## IS AL GORE A CLIMATE SCIENTIST? NO! SO WHY LISTEN TO HIM?!

### Breath is toxic waste?

<http://www.junkscience.com/ByTheJunkman/20080306.html> "The federal government may soon declare your very breath to be toxic regardless of its minty freshness. Consistent with last spring's Supreme Court ruling that the Environmental Protection Agency may regulate carbon dioxide (CO<sub>2</sub>) as a hazardous air pollutant, the agency is evaluating how CO<sub>2</sub> could be regulated as a hazardous substance under its notorious Superfund program, according to *Carbon Control News* (Mar. 4). *(Thank you once more greenies, what would we do without your global concerns for our welfare? Your in-depth knowledge of science puts real scientists to shame.)*

---

### Down But Not Out

<http://co2science.org/> "A week ago we experienced a terrorist-like Denial of Service Attack on our website that rendered it inaccessible to patrons. Unfortunately, the company that managed our website was unable to stop the attack, and we had to make the decision to host our website elsewhere. Moving our website to another server is not a simple task and must take place in stages. For now, only the current weekly issue of *CO<sub>2</sub> Science* will be accessible, followed by a gradual return to full website access and functionality in the coming days and weeks." *(Thank you greenies, what would we do without your global concerns for our welfare?)*

---

### Lights out, America?

<http://www.junkscience.com/ByTheJunkman/20080207.html> "Environmental groups say the region [DC] should try harder to save energy before it goes out looking for more," the *Post* reported. "The cheapest power plant out there is the one you never have to build." The environmentalists' new tactic in their war against us meeting our basic energy needs focuses on coal-burning power plants, which are at the top of the list of carbon dioxide emitters. "Increasing electricity almost inevitably leads to more global warming emissions," an activist told the *Post*. And the activists have used global warming fears to great effect. "Stymied in their plans to build coal-burning power plants, American utilities are turning to natural gas to meet expected growth in demand, risking a new upward spiral in the price of that fuel," the *New York Times* reported this week. *(Thank you greenies, where would we end up without you? Dark unheated homes? Horse and cart? You bunch of morons.)*

---

### Church of England Bishops call to "Save the World"

<http://www.telegraph.co.uk/earth/main.jhtml?xml=/earth/2008/02/05/ealent105.xml> The earth can sustain an estimated 0.8 tons per person. Sir John Houghton, former chief executive of the Met Office and the first chairman of the IPCC's scientific assessment, advises Tearfund on climate change. He said: "The scientific debate about the basic issue of climate change is over. Climate change is real. *(Thank God for such wisdom: climate change is real – such knowledge, such insight. We owe our very lives to climate change! Wake up!!)*

---

### DiCaprio invited to give green talk

<http://ukpress.google.com/article/ALeqM5jxE53YooQBq4UUA1Xi86IMbh7vw>

Hollywood actor Leonardo DiCaprio has been invited to Scottish Parliament to speak about climate change. Green Party MSP Patrick Harvie has written to DiCaprio, inviting him to come to the Holyrood and speak to MSPs about the threat of global warming.

*(Good to see the Scottish Green Party are asking such an expert in climate change to explain it all to them. Wonder who will write the script, as the level of intelligence of both the speaker and audience has to be taken into account here. The Green MSP obviously got the message : "Bull manure baffles brains.")*

### Power bills to double to pay carbon costs – 1 February 2008

<http://www.theaustralian.news.com.au/story/0,25197,23141602-11949,00.html>

MAJOR Australian greenhouse gas emitters believe that emissions-trading costs of about \$65 a tonne of carbon are inevitable, forcing household electricity bills to rise by almost 100 per cent.

## Focus the Nation gets kids involved

<http://www.gainesville.com/article/20080202/NEWS/802020320/1002/NEWS> She gave her classmates an overview of her essay on global warming. "We need to stop it," Alexandra said. "If we don't, the plants may not be as productive and we may not have enough food." Alexandra urged her classmates to make small changes in their lives to reduce global warming; for example, by riding their bikes to school or using gel instead of aerosol hair products.
